

BLUE BAMBOO

simple. reliable. affordable.

ABOUT this company

The world's renowned iPad Point of Sale solution provider in the US has provided a tailored solution to merchants in various industries.

THE CHALLENGE

This solution provider has designed a solution by using Apple iPad, an EMV chip reader that was offered by a top selling third party. What they need is a Bluetooth printer that can connect to iPad via Bluetooth and print paper receipts.

THE SOLUTION

This solution provider selected Blue Bamboo's Apple MFi certified PocketPOS™ P25i Bluetooth Printer to be part of the total solution. The solution is that P25i Bluetooth printer and the third party's EMV chip reader connect through Bluetooth to the iPad.

Merchants go to the payment screen (payment application developed on the iPad), and enter the amount that needs to be paid. Customers insert the card into the EMV chip

reader, and enter the PIN. After running the transaction, Blue Bamboo's P25i prints receipts: the merchant's version and the client's version.

The video of this solution can be seen on YouTube at: https://www.youtube.com/watch?v=jw1RC3Wt7Ec&feature=em-upload_owner&utm_content=buffer53c0a&utm_medium=social&utm_source=twitter.com&utm_campaign=buffer.

In fact, Blue Bamboo's Bluetooth P200 EMV Level 1, Level 2, PCI PTS 3.X certified printer can be used to replace the third party's EMV chip reader the P25i Bluetooth printer.

SUMMARY

This famous American iPad Point of Sale solution provider built a total solution for merchants by using Blue Bamboo's P25i Bluetooth Printer, the third party's EMV chip reader to connect to iPad via Bluetooth.
