

BLUE BAMBOO
simple. reliable. affordable.

ABOUT this organization

A well-established traffic management solution provider has been dedicated to delivering the top-quality mobile solutions for police officers. They have provided “one-stop service” for governmental organizations.

The Challenge

Police officers today need a mobile solution to supervise/control traffic. What they needed was a mobile printer with PIN PAD.

The Solution

This solution provider selected the Blue Bamboo’s Bluetooth PocketPOS™ P200 to pair with their Android PDA to build a total solution. Police officers can manage data searching, information input, taking photos and videos, finger print acquisition and bar-code scanning, etc. via their Android PDA. They also can print receipts via Bluetooth P200, when passengers pay fines by credit or debit card payment.

Bluetooth P200 is the ideal device that can be used for credit and debit card transactions, pairing with Android PDA/tablet via Bluetooth, and PIN input via the PCI PTS 3.X certified PIN PAD, while printing tickets and receipts.

In addition to the Bluetooth Version, Blue Bamboo also has the GPRS version P200 for solution providers to choose from.

SUMMARY

This traffic management solution provider selected Blue Bamboo’s PocketPOS P200 as the PDA for police officers to oversee traffic, by using the P200’s printer and PIN PAD.
