

BLUE BAMBOO
simple. reliable. affordable.

ABOUT the Food delivery App

With rapid growth of E-Wallet in China, customers could bond their Credit/Debit card with the App and make payment on mobile devices. A company developed an App providing food order and delivery service to allow customers to pay without a POS terminal and bank cards. The App is welcomed by many white collars who don't want to go to a crowded Canteen for lunch and also benefits families who want to enjoy great meals even not stepping out of their home, etc.

THE SOLUTION

Food delivery requires punctuality. The E-wallet App instructed customer to pay on order and gives lead time for delivery. The business owner saved a lot of money in POS hardware investment for customers to pay on delivery. However, a mobile printer is still a necessity to print the receipt including date, time, food list, price, addresses, etc and collect customer's signature when the delivery process is completed. Partner up with Blue Bamboo, the global Mobile printer supplier provides the SDK for the Food delivery App Company to integrate into their App. The P10 interfaces with a smart device via blue tooth and receive commands from Food delivery App to print receipts. There is a designated silicon case and belt mounter to minimize the damage from dropping and for easy carrying on the way.

About Blue Bamboo

Blue Bamboo is the global supplier of printing and payment hardware, also acts as software system integrator. Well-built technical support and capability strengthen Blue Bamboo to provide leading total solution for customers. www.bluebamboo.com
