

**BLUE BAMBOO**

simple. reliable. affordable.

## **ABOUT the creative order sequence in restaurant kitchen**

The nationwide famous restaurant in the UK embraces Blue Bamboo's MFi certified mobile thermal printer P25 to print customer's order in the kitchen to reduce the commute for waiters/waitress and increase the efficiency of preparing cuisines and services.

### **THE CHALLENGE**

Customer is the god in all service industries, especially in the restaurant which is the battlefield for waitress/waiter. The statistic shows it averagely takes 2.5 minutes for a waiter to pass a single customer order to the kitchen and back to the dining area. Thus, it delays 2.5 minutes for chefs to cook for the order and there are 2.5 minutes waiting for customers and 2.5 minutes without services to customers. Can you imagine how many minutes will be spent in waiting if there are 100 orders a day in this restaurant? Can we increase the efficiency?

### **THE SOLUTION**

Partnered with Blue Bamboo enables chefs to receive instant order by printed from P25 from the electronic menu in the iPad. The P25 which buckled with the chef pairing with an iPad to print the order consists of table number, food, time, and overlap food from another table. This technology will save the time for waiter/waitress passing the order from the dining area to the kitchen and categorize automatically for overlap orders for chef to prepare together. This solution greatly increase the efficiency both in kitchen and canteen as well as squeezing more than for customer service and saving cost for the restaurant owners.

### **About Blue Bamboo**

Blue Bamboo is the global supplier of printing and payment hardware and software system integrator. Well-built technical support and capability strenghten Blue Bamboo to provide leading total solution for customers. [www.bluebamboo.com](http://www.bluebamboo.com)
